

ABSTRACT

BIOLOGICAL INFORMATION MONITORING SYSTEM

A biological information monitoring system includes a plurality of biological information sensor modules 1A and 1B attached to the right side and left side of a subject body, which sensor modules 1A and 1B each incorporate a biological information sensor for detecting biological information, and a communicator capable of wireless radio communication for the biological information. At least one of the biological information sensor modules 1A and 1B includes a determination device for performing determination of an abnormality by comparing the biological information detected by one biological information sensor in one of the sensor modules with biological information sent from the other biological information sensor module through the communicator.
